

Supplementary S2 Survey invitation letter to forest managers

Dear forest managers and planners,

We are a group of wildlife scientists that work on interactions between birds and forest management. We are interested in obtaining the perspectives of foresters and forest planners on the value of information this is provided to them by wildlife scientists. Results of this survey will be used to develop relevance criteria that we will address in a paper titled: "Do review papers on forest bird-vegetation relationships provide actionable information to forest managers in eastern North America?" that will be submitted for a special issue of the journal *Forests* titled: "Evidence synthesis in forest management". Results may also be used for a future publication that describes survey responses in more detail.

We have a brief survey that will take about 10-20 minutes to complete. You may participate in this study if you are a field forester, a forest manager, a forest planner, or an academic researcher with an emphasis on forestry, silviculture, or forest management. Your participation is completely voluntary and no identifying information will be collected. You are free to skip any question that you choose and can stop the survey at any time. If you would like to participate in the survey, please click on the link below and you will be directed to the informed consent page of the survey. Feel free to forward this invitation to other forest managers in your network.
