

Supplementary Materials

Supplementary S5. List of Review Papers That Report Bird–Vegetation Relationships at the Thematic Resolution of Forest Type or Tree Species.

Inclusion criteria: bird data (quantitative or qualitative) associated with vegetation data for: (1) at least one eastern forest type (based on classification schemes that rely on dominant tree species and/or tree species composition); or (2) eastern forest tree species.

More information please see Supplementary S5 final. xlsx.

Supplementary S6. List of Review Papers that Report Bird–Vegetation Relationships with Forestry-Relevant Stand Structural Attributes or Specific Within-Stand Features.

Inclusion criteria: bird data (quantitative or qualitative) associated with vegetation data for: (1) structural attributes of basal area, tree density, tree size (diameter or height), stocking, canopy cover, site index and related metrics; or (2) data on within-stand vegetation features (live or dead), for example: large/legacy/wildlife trees, snags, downed wood, soft or hard mass, shrubs or mid-canopy trees, or water features.

More information please see Supplementary S6 final. xlsx.

Supplementary S7. Interactive Data Visualization Showing Variation in Bird Species Abundance by Forest Types/Age Classes, Based on Static Figure 12 in the Main Text.
